Preface	vii
Chapter 1. Several Complex Variables	1
1.1. Analytic functions in complex spaces	1
1.2. Cauchy formula in polydiscs	5
1.3. Analytic functions and power series	11
1.4. Subharmonic functions	14
1.5. Separate analyticity	22
1.6. Levi forms—continuity principle (I)—Hartogs extension theorem	24
1.7. Logarithmic supermean of Taylor radius of holomorphic functions—continuity principle (II)—propagation of holomorphic extendibility	30
1.8. Domains of holomorphy and pseudoconvex domains	39
1.9. L^2 -estimates for $\bar{\partial}$ on q -pseudoconvex domains of \mathbb{C}^n	50
1.10. Subelliptic estimates for $\bar{\partial}$	67
Chapter 2. Real Structures	77
2.1. Euclidean spaces and their diffeomorphisms	77
2.2. Integration of vector fields and vector bundles—Frobenius theorem	83
2.3. Real symplectic spaces—Frobenius-Darboux theorem	90
2.4. Subelliptic estimates and hypoellipticity of systems of vector fields	96
2.5. Miscellanea: foliations—orbits	100
Chapter 3. Real/Complex Structures	107
3.1. Complex structures—real underlying structures—complexifications	107
3.2. CR manifolds	113
3.3. CR functions and CR mappings	123

3.4. The Levi form of a submanifold $M \subset \mathbb{C}^n$ and an abstract CR structure	132
3.5. Real/complex symplectic spaces	136
3.6. Approximation of CR functions by polynomials	144
3.7. Analytic discs and the extension of CR functions: the “edge of the wedge” theorem, the deformation of discs for manifolds of type 2 and the Levi extension	151
3.8. Iterated commutators, finite type, Bloom-Graham normal form: deformation of discs for manifolds of higher type	159
3.9. Partial lifts of analytic discs and CR curves	168
3.10. Defect of analytic discs—deformation of non-defective discs—wedge extension from minimal manifolds	174
3.11. Propagation of CR extendibility	177
3.12. Separate real analyticity	183
Bibliography	191
Subject Index	197
Symbols Index	199
